AMRITA VISHWA VIDYAPEETHAM
DEEMED TO BE UNIVERSITY UNDER SECTION 3 OF UGC ACT, 1956
COIMBATORE CAMPUS

INSTITUTION'S INNOVATION COUNCIL
(Ministry of Education Initiative)

GENESIS

Genesis Ideathon: Final Presentation

Team ID: *GEN26-AOH-I020*

Team Name: *INNOVITA*

Domain: *7(Digital Technologies, AI and Cybersecurity)*

Amrita Vishwa Vidyapeetham, Coimbatore Campus

Date: 11th October 2026

Presentation Outline

1. Problem Statement
2. Problem Understanding
3. Existing Gaps & Challenges
4. Our Proposed Solution
5. Technical Approach
6. Innovation & Uniqueness
7. Feasibility & Scalability
8. Use Cases
9. Use Cases
10. Use Cases
11. Use Cases
12. Impacts and Benefits

Problem Statement

AI powered platform for students to manage studies, academic work and keep them connected with other students of the same institution; One stop solution for all problems of a student: classes, deadlines, notes etc.

Problem Understanding

- Most students such as high school students, university students etc... are the people who face the problem.
- Fragmented information, manual planning, poor time management and lack of personal guidance cause these problems because students dont have an organized and centralized portal where they are able to access all the academic resources and because of that they go through many different apps trying to find the needed resources and that causes poor time management, stress and hectic last minute exam preparations
- The students face high exhaustion, constant worry about deadlines, cramming everything at the last minute, Lower grades and poor health and becomes disorganized in their life and in their academics.

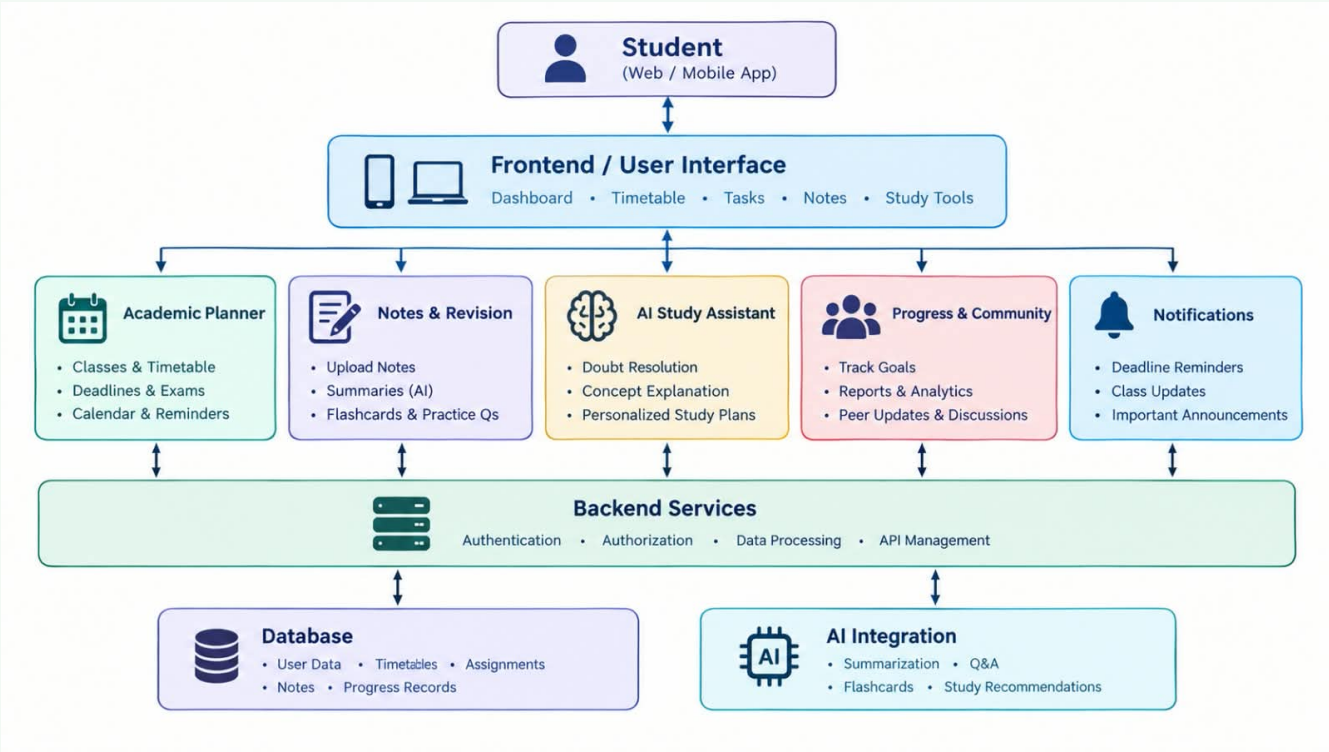

Existing Gaps & Challenges

- **Lack of Adaptive and Personalized Study Planning**: Many study planners rely on fixed schedules and do not adequately adapt when students miss sessions, fall behind, or have upcoming exams.
- **Lack of Effective Progress and Weak-Topic Identification** :Many study-planning tools track completed tasks but do not clearly identify which subjects or topics a student struggles to understand.
- Even with personalized schedules, reminders, and AI assistance, students may procrastinate, lose motivation, or ignore their study plans, students would not be able to study by themselves and lack of communication between students lead to missed assignments and deadlines.

Our Proposed Solution

- AI powered common platform for students that brings a student's timetable, tasks, notes, progress tracking, and exam revision together in one platform . Also acts as an academic reserve consisting notes,ppts,pdf,softcopies of text books, previous year papers etc... which benefits different students across the institution.
- **1. Institutional Integration:** The institution registers on our app and uploads or integrates class timetables, academic calendars, examination dates, syllabi, and assignment deadlines. **2. Deployment to Students and Teachers:** Students receive personalized dashboards and revision tools. Teachers can share learning resources, publish deadlines, and monitor class-level progress using authorized data. **3.Scalable infrastructure:** Cloud hosting, secure databases, and AI services can support increasing numbers of users as more institutions join. **4.Privacy and access control:** Student information is protected through role-based permissions, secure data handling, and institution-approved access policies.
- Saves time and effort, adapts to changing schedules, improves revision efficiency Provides progress awareness.

Technical Approach

Tech Stack

Frontend: React.js+Tailwind CSS

Backend: Firebase Authentication+Cloud Functions

Database: Cloud Firestore

AI/ML, APIs, or Hardware: Gemini/Claude API + Firebase Cloud Messaging; standard laptops, smartphones, and internet access.

Innovation & Uniqueness

- **1.** All-in-One Integration **2.** Adaptive Scheduling **3.** Progress-Based Personalization **4.** Integrated AI Revision **5.** Individual and Institutional Benefits
- It combines organization, personalization, and adaptability in a single solution, helping students manage their academic responsibilities more effectively and prepare for exams with greater confidence.
- AI-powered personalized study planning, adaptive scheduling, and progress-based revision in one integrated platform that continuously adjusts to students' changing academic needs whereas other apps lack centralisation and tend not to solve the actual academic problems of a student .

Feasibility & Scalability

- **Feasibility:1) Technically feasible:** Can be developed using existing technologies such as cloud databases, AI APIs, timetable generators, and notification systems. **2)Affordable prototype:** A basic version can start with timetable management, task tracking, progress monitoring, and AI-generated summaries and quizzes.

- **Scalability: 1)Institution-wide deployment:** Can expand from individual students to schools, colleges, and universities. **2)Cloud-based infrastructure:** Can support growing numbers of users, academic resources, and AI requests as usage increases. **3)Flexible integration:** Can be adapted to different syllabi, academic calendars, departments, and examination systems.

- **Risks: 1)Data privacy and security:** Student records and learning data must be protected from unauthorized access. **2)AI accuracy:** Incorrect summaries, quiz answers, or study recommendations could mislead students. **3)Student engagement:** Students may ignore reminders or stop following their study plans.

Use Cases

- **Use case 1:** AI-Powered Personalized Timetable and Time Management
  Scenario: A student struggles to manage school hours, assignments, examinations, and personal activities because of poor time management.
  Use case description:
  This app helps students create personalized study timetables using its AI-powered timetable generator. The student enters their subjects, examination dates, available study hours, deadlines, and topics that require more attention. Based on these details, the AI generates a realistic timetable that distributes study sessions according to the student's priorities and available time.
  The student can customize the timetable whenever unexpected tasks arise or their daily routine changes. The app provides reminders and motivational notifications to help students stay consistent. Its timetable-linked alarm feature reminds students when it is time to begin a planned activity, helping them develop discipline and reduce procrastination.
  Additionally, students can track completed tasks and pending assignments through a personal task manager. If a student misses a scheduled session, the app can help reorganize the remaining tasks into a revised timetable.

Expected outcome: Students can manage their time more effectively, complete assignments before deadlines, maintain a balanced routine, and develop consistent study habits without feeling overwhelmed by academic responsibilities.

- **Use case 2: AI-Assisted Quick Revision and Exam Preparation**
  Scenario: A student has an examination approaching but has limited time to revise multiple subjects and chapters.
  Use case description:
  This app acts as an intelligent revision companion for students preparing for school examinations, competitive examinations, and class assessments. Students can use their available notes and study materials to organize revision sessions according to the time remaining before an examination. The app can help identify important topics, generate concise revision notes, create flashcards, and prepare practice questions based on the available learning materials. Students can divide large chapters into smaller study sessions, making revision easier to manage. The AI can also help students prioritize topics they find difficult and schedule additional practice for those

areas. The student can record incomplete topics and mark each revision task as completed. The app's motivational quotes, encouraging stories, and its AI features can provide additional encouragement during demanding examination periods. Students can use these tools alongside their textbooks, class notes, and teacher-provided materials. Expected outcome: Students can revise systematically, identify knowledge gaps, practise important concepts, and use their remaining preparation time efficiently. This approach supports better preparation and reduces last-minute confusion while encouraging independent learning.

- **Use case 3: Procrastination Reduction and Consistent Study Habits**
  Scenario: A student frequently postpones studying because of distractions, excessive mobile usage, low motivation, or difficulty starting academic tasks.
  Use case description:
  This app supports students in overcoming procrastination by combining task management, motivational support, reminders, and habit-building strategies. Students can enter their daily academic goals, divide difficult tasks into smaller activities, and schedule focused study sessions. The app sends

reminders when tasks are due and encourages students to begin with manageable activities rather than postponing their work. Through AI, students can access guidance on time management, maintaining concentration, and building productive study routines. Motivational quotes and encouraging stories can help students regain focus when they feel discouraged. The app can also prompt students to reduce unnecessary screen time and take control of their digital habits. Students can monitor completed tasks and review their progress over time. By observing their consistency, they can identify unproductive patterns and make improvements to their routines. The aim is not to force students to study continuously but to help them balance focused learning with adequate rest and personal activities. **Expected outcome:** Students can gradually develop self-discipline, reduce avoidable delays, improve task completion, and establish sustainable study habits that support long-term academic growth. **Overall impact:** These three use cases demonstrate how our app combines AI-based planning, intelligent revision, and motivational support in one platform to make learning more organized, personalized, and manageable for students.

Impacts and Benefits

- **1.**Stopping daily mess and making it easy for students to study, stay organized, and handle school life. **2.**Environmental Benefits:Centralising notes, schedules, and deadline tracking entirely digitally cuts down the demand for physical notebooks, printed syllabus sheets, binders, and sticky notes, reduces stress and cognitive load.
- **1)Social Impact:** Promotes better time management, independent learning, and consistent study habits. It may reduce academic stress by helping students organize tasks and prepare efficiently for examinations. **2)Economic Impact:** By combining multiple study tools into one platform, the app can potentially reduce costs, save time, improve productivity, and reduce administrative workload in educational institutions. **3)Environmental Impact:** Digital timetables, notes, and revision materials can reduce paper consumption and printing waste.
- Our app improves student time management, organization, and revision efficiency. It boosts study completion, deadline adherence, prep speed, and quiz scores, measuring success by comparing pre- and post-pilot user data and feedback.

Sustainable Development Goals (SDGs)

SDG Number	Target Number	Goal Name	Connection
SDG 4	4.4	Quality education	Our app unifies study materials, planning, revision, and AI tools to boost student organization and digital learning skills.
SDG 3	3.4	Good health and well-being	Our app uses reminders, schedules, and progress tracking to help students plan ahead, reduce last-minute stress, and support overall well-being.
